IATA Teams with InfoTrust to Launch EasyDGR

***Online solution for dangerous goods shippers will increase safety,
streamline operations, reduce rejected shipments to save costs***

IRVINE, CA – February 24, 2011 – InfoTrust Group, along with International Air Transport Association (IATA), announced today the go-live of EasyDGR, a complete online platform for shipping dangerous goods by air in compliance with industry regulations. Built and hosted by InfoTrust, the customizable solution allows shippers to automatically create an electronically validated Dangerous Goods Declaration, increasing safety, saving time and streamlining operations.

EasyDGR was created to solve one of the biggest problems for shippers: creating accurate documentation to meet airline compliance requirements and avoid rejected shipments. This user-friendly web solution offers quick search access to IATA's complete Dangerous Goods Regulations (DGR) and other reference material, and features built-in intelligence to validate information in real time – virtually eliminating mistakes. The smart system generates all required document outputs, including XML format that is IATA e-freight ready.

EasyDGR was developed by InfoTrust using TechSight/X® Framework. This product provides IATA with a complete platform for managing, publishing and delivering the data to its customers. TechSight/X utilizes throughout its architecture best of breed XML technologies such as a native XML database which affords IATA maximum flexibility and performance among other benefits.

IATA selected InfoTrust's information delivery platform due to its ability to manage massive volumes of data, while providing a user-friendly experience to simplify the business of shipping dangerous goods by air. IATA's number one priority is safety and this innovative solution will help to streamline dangerous goods shipping processes across the entire supply chain.

"We are pleased that IATA has selected InfoTrust Group to help them meet the challenges presented by the management of technical publications, delivering this content to tens of thousands of international users," stated Geoffrey Godet. "The combination of our experience, expertise and proven software tools and services will provide a perfect fit for IATA's short-term and long-term objectives within their new information delivery platform."
