US Airways selects Jouve's AirGTI Enterprise Suite

Jouve to provide integrated electronic technical information and task management solution

IRVINE, CA – September 6, 2006 –Jouve Aviation Solutions announced today that US Airways has selected its entire AirGTI® Suite of products and services to author, manage and distribute all of the newly merged airline's technical information.

US Airways, the country's largest low-cost airline, has entrusted Jouve to handle all of its technical content including standard operating procedure manuals, OEM airframe and engine manuals, engineering documentation and task cards across its mixed fleet of Boeing, Airbus and Embraer aircraft.

The challenges facing US Airways following the merger prompted the airline to seek a solution to consolidate and standardize the technology and business processes of two airlines. "As the new US Airways looked to consolidate its organization, business processes and technology taking the best of what each airline had to offer, Jouve's solution was selected to replace one of the only two systems that could not support the needs of the new airline," stated Sr. Vice President and CIO Joe Beery.

Jouve's end-to-end document and content management solution will provide the new US Airways with streamlined processes for disseminating content throughout its entire merged enterprise. The implementation of AirGTI Enterprise Suite will provide seamless controlled content change management across US Airways' maintenance and engineering publication environments and ensure complete, accurate and timely dissemination of content throughout the lifecycle of each publication.

"The deployment of Jouve's solution will meet both the short term requirements of the merger as well as our long term goal of greater efficiencies and productivity," stated Hal Heule, Sr. Vice President of Maintenance at U.S. Airways. "Jouve's depth and breadth of practical experience, the maturity of its solution and its focus on providing tools that actually benefit our front line users are key qualities that propelled Jouve to the top of the list."

To optimize US Airways maintenance and engineering operation, Jouve will provide its New Generation Engineering Solution for the management and distribution of maintenance program and engineering information including work package creation and distribution. "Jouve embraces this unique opportunity to work together with US Airways to revolutionize the way that airlines manage technical information," stated Jouve President Geoffrey Godet. "Our goal is to help US Airways realize their vision and enhance their competitive edge by leveraging a paperless environment."

ABOUT US AIRWAYS

US Airways and America West's recent merger creates the fifth largest domestic airline employing nearly 35,000 aviation professionals. US Airways, US Airways Shuttle and US Airways Express operate approximately 3,800 flights per day and serve more than 230 communities in the U.S., Canada, Europe, the Caribbean and Latin America. US Airways is a member of Star Alliance, which provides connections for our customers to 842 destinations in 152 countries worldwide. Additional information on US Airways can be found at www.usairways.com.

ABOUT JOUVE AVIATION SOLUTIONS

AirGTI is not just a computer system, but represents a way of doing aeronautical business and has simplified the way that aviation publications are managed. By gaining control of its data, an operator can increase productivity and reduce the cost of change management. Maintaining the quality, accuracy, and reliability of data are essential in the achievement of operational excellence. In today's value-conscious environment where we must do "more with less" in a method faster and better than the competition, a comprehensive data integrity management solution is imperative. The AirGTI Suite and AirGTI Services provide this by merging specialized knowledge and experience with airline business process automation and technology. The synergy that results from this combination is what makes the AirGTI solution so powerful, unique, and valuable. Its functions and features are designed to provide cost reduction, control and increase processing efficiency through an integrated change management and paperless strategy.
